INTRODUCTION

This bibliography comprises 184 literature citations on human organ transplantation, immunology, histocompatibility, immunosuppression, and preservation. It was prepared through cooperative efforts of the staffs of the National Institute of Allergy and Infectious Diseases, National Institutes of Health Library, and National Library of Medicine. The search was initiated by Joan Mavity, NIH Library. The bibliography was computer-processed at NLM.

Coverage

This document covers literature input to NLM's Medical Literature Analysis and Retrieval System (Medlars) from January 1966 through July 1970. About 2300 periodicals are regularly scanned at NLM.

Medical Subject Headings (MeSH), NLM's technical language, provides controlled subject access to the biomedical literature. These headings are used for indexing journal articles, cataloging books, and making bibliographic searches of NLM's computer-based file. A list of these headings is given in the January 1969 issue of Index Medicus.
